## Background Information

CCNT1, also named as CycT1, belongs to the cyclin family and Cyclin C subfamily. It is a regulatory subunit of the cyclin-dependent kinase pair (CDK9/cyclin-T1) complex which also called positive transcription elongation factor B (P-TEFb). In case of HIV or SIV infections, CCNT1 binds to the transactivation domain of the viral nuclear transcriptional activator, Tat, thereby increasing Tat's affinity for the transactivating response RNA element (TAR RNA). CCNT1 serves as an essential cofactor for Tat, by promoting RNA Pol II activation, allowing transcription of viral genes. The antibody is specific to CCNT1.

## Selected Validation Data

K-562 cells were subjected to SDS PAGE followed by western blot with 20992-1-AP (Cyclin T1 antibody) at dilution of 1:300 incubated at room temperature for 1.5 hours.

Immunofluorescent analysis of (4% PFA) fixed MCF-7 cells using Cyclin T1 antibody (20992-1-AP) at dilution of 1:200 and CoraLite®488-Conjugated AffiniPure Goat Anti-Rabbit IgG(H+L).
