Background Information

SPDYC (Speedy protein C), also known as RINGOC and Ringo2, promotes progression through the cell cycle via binding and activation of CDK1 and CDK2. Downregulation of SPDYC inhibits cell growth, reduces the fraction of cells in G1, and increases the S and G2 populations (PMID: 18802405). SPDYC is involved in the spindle-assembly checkpoint and required for recruitment of MAD2L1, BUBR1 and BUB1 to kinetochores (UniProt).
