Background Information

KHDC3L (also known as Filia and ES cell-associated transcript1 [Ecat1]) as a key regulator in safeguarding the genomic stability of mouse early embryonic cells. KHDC3L is critical in preventing the replication associated DNA DSBs in epiblast cells (PMID: 29125140). Importantly, by analyzing KHDC3L mutations causes recurrent pregnancy loss by inducing genomic instability of human early embryonic cells (PMID: 31609975).
