Background Information

SLC38A1 (Sodium-coupled neutral amino acid transporter 1), is also named as SNAT1, which is a symporter that cotransports short-chain neutral amino acids and sodium ions from the extracellular to the intracellular side of the cell membrane (PMID:20599747, PMID:10891391). Inhibition of SLC38A1 reduced tumor growth, cellular migration, invasion, and induced senescence in melanoma cells (PMID:35565278). SLC38A1 was identified as a positive regulator of mTORC1 in neurons, which promoted ischemic brain damage by mTOR-autophagy system (PMID:31552299). SLC38A1 is mainly expressed in brain and placenta.
