For Research Use Only

## P16-INK4A Polyclonal antibody

Catalog Number:30519-1-AP

Basic Information	Catalog Number: 30519-1-AP	GenBank Accession Number: NM_000077	Purification Method: Antigen affinity purification					
	Size: 150ul , Concentration: 900 µg/ml by Nanodrop; Source: Rabbit Isotype: IgG Immunogen Catalog Number: AG29567	Genel D (NCBI): 1029 Full Name: cyclin-dependent kinase inhibitor 2A (melanoma, p16, inhibits CDK4) Calculated MW: 17 kDa Observed MW: 16 kDa	Recommended Dilutions: WB 1:1000-1:6000 IP 0.5-4.0 ug for IP and 1:500-1:2000 for WB					
				Applications	Tested Applications:	Positive Cont	Positive Controls:	
					FC, IP, WB, ELISA Species Specificity: Human	WB : HEK-293 ( IP : HEK-293 co	cells, HeLa cells ells,	
				Background Information	P16-INK4A is also named as CDKN2A, MLM, Tumor suppressor ARF, Alternative reading frame. The tumor suppressor protein p16Ink4a (encoded from the CDKN2A locus) is often transcriptionally activated in cells undergoing senescence and is one of the main regulators of this program, and it is upregulated in multiple tissues during aging (PMID:17055429). p16-Ink4a is the principal member of the Ink4 family of CDK inhibitors. p16-Ink4a contributes to the regulation of cell cycle progression by inhibiting the S phase. p16Ink4a binds to CDK4/6, inhibiting cyclin D- CDK4/6 complex formation and CDK4/6-mediated phosphorylation of Rb family members. Expression of p16-Ink4 maintains the Rb family members in a hypophosphorylated state, which promotes binding to E2F1 and leads to G1 cell cycle arrest (PMID: 21297668).			
	senescence and is one of the main re (PMID:17055429). p16-Ink4a is the pr the regulation of cell cycle progression CDK4/6 complex formation and CDK maintains the Rb family members in	gulators of this program, and it is upreg rincipal member of the Ink4 family of C on by inhibiting the S phase. p16Ink4a 4/6-mediated phosphorylation of Rb fa	ulated in multiple tissues during aging DK inhibitors. p16-Ink4a contributes to binds to CDK4/6, inhibiting cyclin D- mily members. Expression of p16-Ink4a					
Storage	senescence and is one of the main re (PMID:17055429). p16-Ink4a is the pr the regulation of cell cycle progression CDK4/6 complex formation and CDK maintains the Rb family members in	gulators of this program, and it is upreg rincipal member of the Ink4 family of C on by inhibiting the S phase. p16Ink4a 4/6-mediated phosphorylation of Rb fa a hypophosphorylated state, which pro	ulated in multiple tissues during aging DK inhibitors. p16-Ink4a contributes to binds to CDK4/6, inhibiting cyclin D- mily members. ## Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 30519-1-AP (P16-INK4A antibody) at dilution of 1:3000 incubated at room temperature for 1.5 hours.

IP result of anti-P16-INK4A(IP:30519-1-AP, 4ug; Detection:30519-1-AP 1:1000) with HEK-293 cells lysate 1280 ug.

1X10<sup>^6</sup> HeLa cells were intracellularly stained with 0.8 ug Anti-Human P16-INK4A (30519-1-AP) and Coralite®488-Conjugated AffiniPure Goat Anti-Rabbit IgG(H+L) at dilution 1:1000 (red), or 0.8 ug Isotype Control. Cells were fixed and permeabilized with Transcription Factor Staining Buffer Kit (PF00011).
