Background Information

CD45, also known as protein tyrosine phosphatase, receptor type C, is a type I transmembrane protein expressed on the surface of all haematopoietic cells with the exception of erythrocytes and platelets (PMID: 3489673; 28615666). CD45 is a pan-haematopoietic cell marker and has been shown to be essential for T- and B-cell activation and signalling (PMID: 9429890; 16378097). CD45 exists as multiple isoforms due to alternative splicing of three exons (4, 5, and 6, designated A, B, and C) in the extracellular domain (PMID: 12414720). CD45RO is the shortest CD45 isoform (lacking all three exons) and is expressed by activated and memory T cells, thymocytes, some B cells, and weakly on granulocytes and macrophage (PMID: 27100180; 12414720).

Selected Validation Data

1X10⁶ human PBMCs were surface stained with CL405 CD45RA and 5 ul CoraLite® Plus 594 Anti-Human CD45RO (CL594-65150, Clone:UCHL1) or CoraLite® 594 Mouse IgG2a Isotype Control. Cells were not fixed. Lymphocytes were gated.
