Background Information

TMIGD1 (Transmembrane and immunoglobulin domain containing 1) is involved in various cellular processes such as regulation of cell structure, cell-cell adhesion, and cellular movement. It protects cells from oxidative- and nutrient-deprivation-induced cell injury by stabilizing the transepithelial electric resistance and permeability of renal epithelial cells. TMIGD1 has a calculated molecular mass of 29 kDa, and can be detected as 45 kDa due to the N-glycosylation (PMID: 26342724).
