Background Information

TAOK3(Serine/threonine-protein kinase TAO3) is also named as DPK, JIK, KDS, MAP3K18 and belongs to the STE Ser/Thr protein kinase family. It acts as an activator of the p38/MAPK14 stress-activated MAPK cascade. In response to DNA damage, it is involved in the G2/M transition DNA damage checkpoint by activating the p38/MAPK14 stress $activated \, MAPK \, cascade, probably \, by \, mediating \, phosphorylation \, of \, upstream \, MAP2K3 \, and \, MAP2K6 \, kinases. \, And \, MAP2K6 \, kinase$ this protein can be autophosphorylated(PMID:20949042).
