## Hintergrundinformationen

CUE domain-containing 2 (CUEDC2) is a ubiquitin-binding motif-containing protein involved in the regulation of the cell cycle, inflammation, and tumorigenesis. It is ubiquitously expressed in human tissues and organs, not only highly expressed in the normal brain, heart and testis, but also some kinds of cancers, such as breast, ovarian and kidney cancers. CUEDC2 could act as an adaptor protein to target IκB kinase (IKK) for dephosphorylation and inactivation by recruiting protein phosphatase (PP1), and thus repressed activation of the transcription factor NF-κB. Moreover, CUEDC2, is a key factor in endocrine resistance in breast cancer.
