Informations générales

CIAO1, also named as CIA1 or WDR39, is a essential component of the cytosolic iron-sulfur (Fe/S) protein assembly machinery. CIAO1 seems to specifically modulate the transactivation activity of WT1 and may function to regulate the physiological functions of WT1 in cell growth and differentiation. It may also play a role in chromosome segregation. The predicted MW of this protein is 38 kDa. 10295-1-AP detected 48-55 kDa band because of phosphorylation. And 10295-1-AP do well in IHC and IF detection.
