Informations générales

DSG3, Desmoglein-3, is the component of intercellular desmosome junctions. Desmosomes are cell-cell junctions between epithelial, myocardial, and certain other cell types. DSG3 is a calcium-binding transmembrane glycoprotein component of desmosomes in vertebrate epithelial cells. It is involved in the interaction of plaque proteins and intermediate filaments mediating cell-cell adhesion. DSG3 is expressed in the basal lower layers of in the skin epidermis (PMID: 30528827). It acts as a prognostic marker of Esophageal Squamous cell carcinoma (PMID:24568510).
