Informations générales

Enolase 3 (ENO3) encodes the β -subunit of enolase, which is distributed in various tissues, including liver, lung, skeletal, and heart. ENO3 plays an important role in both glycogen and cholesterol metabolism. It has been demonstrated that ENO3 deficiency may lead to metabolic myopathies, and ENO3 speeds up hepatic cholesterol ester cumulation induced via the mediation of cholesteryl ester generation. Apart from these, ENO3 has also been involved in various tumors, though the results are contradictory. For example, ENO3 is up-regulated in STK11 mutant pulmonary carcinoma and colorectal carcinoma, while down-regulated in pancreatic cancer and hepatocellular carcinomas. ENO3 has 3 isoforms with the molecular mass of 42-47 kDa. (PMID: 33987359, 35004693)
