Anticorps Monoclonal anti-CD11c

Numéro de catalogue:**CL555-65130**

Informations de base

Numéro de catalogue:	CL555-65130	Numéro d'acquisition GenBank:	BC167225	Méthode de purification:
Taille:	100ug , 0.5 mg/ml	Identification du gène (NCBI):	16411	Purification par affinité
Hôte:	Armenian Hamster	Nom complet:	integrin alpha X	CloneNo.:
Isotype:	IgG			N418

Applications

Applications testées:
FC

Spécificité de l'espèce:
souris

Informations générales

Integrins are cell adhesion receptors that are heterodimers composed of non-covalently associated α and β subunits (PMID: 9779984). CD11c, also known as integrin α X, is a type I transmembrane glycoprotein present on a variety of cells, including monocytes/macrophages, granulocytes, a subset of B cells, NK cells and dendritic cells (PMID: 2897326; 1680915; 1694698; 17389580). As a result of its high level of expression on most dendritic cells, CD11c is typically considered to be a marker of conventional dendritic cells (PMID: 27119555). CD11c forms an α/β heterodimer with CD18 (integrin β 2). CD11c/CD18 acts a receptor for fibrinogen and is important in monocyte adhesion and chemotaxis (PMID: 1671533).

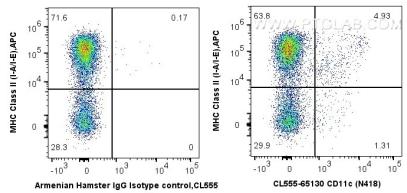

Stockage

Stockage:
Store at 2-8°C. Avoid exposure to light. Stable for one year after shipment.
Tampon de stockage:
PBS with 0.09% sodium azide.

This product is exclusively available under Proteintech Group brand and is not available to purchase from any other manufacturer.

Données de validation sélectionnées

1X10⁶ mouse splenocytes were surface co-stained with APC Anti-Mouse MHC Class II (I-A/I-E) and 0.5 ug CoraLite® Plus 555 Anti-Mouse CD11c (CL555-65130, Clone: N418) or 0.5 ug Isotype Control. Cells were not fixed.
