H3F3B Polyclonal antibody

Catalog Number:10265-1-AP 3 Publications

Basic Information	Catalog Number: 10265-1-AP	GenBank Accession Number: BC001124	Purification Method: Antigen affinity purification	
	Size:	GenelD (NCBI):	Recommended Dilutions:	
	150ul , Concentration: 300 ug/ml by	3021	WB 1:200-1:1000	
	Nanodrop and 233 ug/ml by Bradford method using BSA as the standard;	UNIPROT ID: P84243		
	Source: Rabbit	Full Name: H3 histone, family 3B (H3.3B)		
	lsotype: IgG	Calculated MW: 15 kDa		
	Immunogen Catalog Number: AG0326	Observed MW: 17 kDa		
Applications	Tested Applications: WB, ELISA	Positive Controls:		
	Cited Applications: WB	WB : HEK-293 cells, HeLa cells		
	Species Specificity: human			
	numan			
Background Information	Cited Species: human, mouse Histones are the basic nuclear protein	•	structure of the chromosomal fiber. Five	
Background Information	Cited Species: human, mouse Histones are the basic nuclear protein classes of histone genes have been re replication independent. The latter and terminally differentiated cells. H3F30 form of histone H3 in non-dividing ce Deposited at sites of nucleosomal dis epigenetic imprint of transcriptionall limiting DNA accessibility to the cell	eported, some of which are express re referred to as replacement histo B is one replacement histone [PMI Ills and is incorporated into chrom splacement throughout transcribed y active chromatin. Nucleosomes ular machineries which require DI	e structure of the chromosomal fiber. Five ssed only during S phase, while others are ones and are expressed in quiescent or ID: 8586426]. It constitutes the predominant latin independently of DNA synthesis. d genes, suggesting that it represents an wrap and compact DNA into chromatin, NA as a template. Thereby it has a central rol mal stability [PMID: 14718166, 15776021].	
	Cited Species: human, mouse Histones are the basic nuclear protein classes of histone genes have been re replication independent. The latter are terminally differentiated cells. H3F 31 form of histone H3 in non-dividing ce Deposited at sites of nucleosomal dis epigenetic imprint of transcriptionall limiting DNA accessibility to the cell in transcription regulation, DNA repai	eported, some of which are express re referred to as replacement histo B is one replacement histone [PMI Ills and is incorporated into chrom splacement throughout transcribed y active chromatin. Nucleosomes ular machineries which require DI ir, DNA replication and chromoson	ssed only during S phase, while others are ones and are expressed in quiescent or ID: 8586426]. It constitutes the predominant latin independently of DNA synthesis. d genes, suggesting that it represents an wrap and compact DNA into chromatin, NA as a template. Thereby it has a central rol mal stability [PMID: 14718166, 15776021].

This product is exclusively available under Proteintech Group brand and is not available to purchase from any other manufacturer.

Selected Validation Data

HEK-293 cells were subjected to SDS PAGE followed by western blot with 10265-1-AP (H3F3B antibody) at dilution of 1:300 incubated at room temperature for 1.5 hours.
