Background Information

Tissue Inhibitor of Metalloproteinases-1 (TIMP1) is a naturally occurring protein in the human organism regulating the activity of matrix metalloproteinases (MMPs). TIMP1 encodes a 931 base-pair mRNA and a 207 amino acid protein. Overexpression of TIMP1 can lead to a substantially increase of genes involved in proliferation, apoptosis and signal transduction. In addition, TIMP1 was found to decrease tumor cell sensitivity to multiple anticancer drugs by activation of downstream pathways and exhibited anti-apoptotic activity. Specifically, the TIMP1 could degrade cyclinB1 and activate the NF- κ B signaling pathway to protect breast cancer cells against chemotherapy-induced cell death.
