Angiotensinogen/AGT Polyclonal antibody

Catalog Number:11992-1-AP

Featured Product

27 Publications

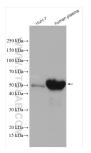

Basic Information	Catalog Number: 11992-1-AP	GenBank Accession Number: BC011519	Purification Method: Antigen affinity purification
	Size: 150ul , Concentration: 430 ug/ml by Nanodrop; Source: Rabbit Isotype: IgG Immunogen Catalog Number: AG2632	GeneID (NCBI): 183 UNIPROT ID: P01019 Full Name: angiotensinogen (serpin peptidase inhibitor, clade A, member 8) Calculated MW: 485 aa, 53 kDa Observed MW: 53 kDa	Recommended Dilutions: WB 1:1000-1:4000 IP 0.5-4.0 ug for 1.0-3.0 mg of total protein lysate IHC 1:50-1:500 IF/ICC 1:50-1:500
Applications	Tested Applications:	Positive Controls:	
	WB, IHC, IF/ICC, FC (Intra), IP, ELISA Cited Applications:	WB : HuH-7	cells, HepG2 cells, human plasma
	WB, IHC, IF	IP : human plasma, IHC : human liver tissue, IF/ICC : HeLa cells,	
	Species Specificity: human		
	Cited Species: human, mouse, rat		
	Note-IHC: suggested antigen i	retrieval with	
	TE buffer pH 9.0; (*) Alternati retrieval may be performed w buffer pH 6.0	vely, antigen	
Background Information	retrieval may be performed w buffer pH 6.0 Angiotensinogen is a precursor of an cleaved by the enzyme renin in resp constriction and regulating salt and f angiotensin converting enzyme (ACE this gene are associated with suscep	vely, antigen vith citrate giotensin II (Ang II), is expressed an onse to lowered blood pressure. It ha luid homeostasis. The resulting proc c) to generate the physiologically ac tibility to essential hypertension, ar clopment. Defects in this gene also h	d synthesized largely in the liver and is s a key role in mediating vascular Juct, angiotensin I, is then cleaved by tive enzyme angiotensin II. Mutations in d can cause renal tubular dysgenesis, a ave been associated with non-familial
	retrieval may be performed w buffer pH 6.0 Angiotensinogen is a precursor of an cleaved by the enzyme renin in resp constriction and regulating salt and f angiotensin converting enzyme (ACE this gene are associated with suscep severe disorder of renal tubular deve structural atrial fibrillation, and infla	vely, antigen vith citrate giotensin II (Ang II), is expressed an onse to lowered blood pressure. It ha luid homeostasis. The resulting proc) to generate the physiologically ac tibility to essential hypertension, ar elopment. Defects in this gene also h immatory bowel disease.	s a key role in mediating vascular Juct, angiotensin I, is then cleaved by tive enzyme angiotensin II. Mutations in Id can cause renal tubular dysgenesis, a ave been associated with non-familial

Selected Validation Data

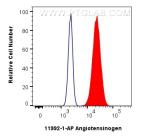

Various lysates were subjected to SDS PAGE followed by western blot with 11992-1-AP (Angiotensinogen antibody) at dilution of 1:2000 incubated at room temperature for 1.5 hours.

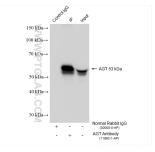

Immunohistochemical analysis of paraffinembedded human liver tissue slide using 11992-1-AP (Angiotensinogen antibody) at dilution of 1:200 (under 10x lens). Heat mediated antigen retrieval with Tris-EDTA buffer (pH 9.0).

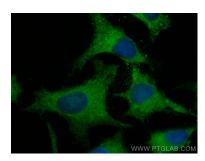

Immunohistochemical analysis of paraffinembedded human liver tissue slide using 11992-1-AP (Angiotensinogen antibody) at dilution of 1:200 (under 40x lens). Heat mediated antigen retrieval with Tris-EDTA buffer (pH 9.0).

1x10⁶ HepG2 cells were intracellularly stained with 0.25 ug Angiotensinogen Polyclonal antibody (11992-1-AP) and Coralite® 488-Conjugated Goat Anti-Rabbit IgG(H+L) (SA00013-2)(red), or 0.25 ug Rabbit IgG control Rabbit PolyAb (30000-0-AP) (blue). Cells were fixed with 4% PFA and permeabilized with Flow Cytometry Perm Buffer (PF00011-C).

IP result of anti-Angiotensinogen (IP:11992-1-AP, 4ug; Detection:11992-1-AP 1:1000) with human plasma lysate 1600 ug.

Immunofluorescent analysis of (-20°C Methanol) fixed HeLa cells using Angiotensinogen antibody (11992-1-AP) at dilution of 1:200 and CoraLite@488-Conjugated AffiniPure Goat Anti-Rabbit IgG(H+L) (SA00013-2).
