Background Information

CD99L2 (CD99 molecule like 2), also known as CD99B and MIC2L1, is a type 1 transmembrane protein that is similar to CD99 (PMID: 12706889). It is expressed on most leukocytes and several other cell types including neuronal cells (PMID: 12706889). CD99L2 may function as a homophilic adhesion molecule as well as play a role in a late step of leukocyte extravasation helping cells to overcome the endothelial basement membrane (PMID: 37199607). Its related pathways respond to elevated platelet cytosolic Ca²⁺ and cell surface interactions at the vascular wall.
