## Background Information

Caveolin-1 (CAV1), a multifunctional protein, is the main constituent molecule of caveolae and represents a scaffolding molecule for several signaling molecules including epidermal growth factor receptor (PMID: 19641024). Several studies have implicated that a reduced expression of CAV1 was found in cancers including head and neck carcinoma (PMID: 19002186). However, other studies recognize CAV1 as a tumor promoter because CAV1 is overexpressed in various kinds of cancers, especially in oral cancer (PMID: 20558341). Recent study also show that CAV1 is involved in astric Cancer (PMID: 25339030). MW of Caveolin-1 is from 20-25 kDa due to phosphorylation (PMID: 10198051).

## Selected Validation Data

WB result of Caveolin-1 antibody (16447-1-AP; 1:3000; incubated at room temperature for 1.5 hours) with sh-Control and sh-Caveolin-1 transfected HeLa cells.

Immunohistochemical analysis of paraffin-embedded human breast cancer tissue slide using 16447-1-AP (Caveolin-1 antibody) at dilution of 1:200 (under 10x lens). Heat mediated antigen retrieval with Tris-EDTA buffer (pH 9.0).

Various lysates were subjected to SDS PAGE followed by western blot with 16447-1-AP (Caveolin-1 antibody) at dilution of 1:4000 incubated at room temperature for 1.5 hours.

IP result of anti-Caveolin-1 (IP:16447-1-AP, 3ug; Detection:16447-1-AP 1:500) with A549 cells lysate 1200ug.
