## SATB2 Polyclonal antibody

Catalog Number:30717-1-AP

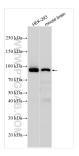

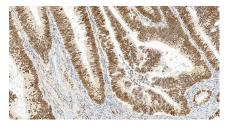

Basic Information	Catalog Number: 30717-1-AP	GenBank Accession Number: BC098136	Purification Method: Antigen affinity purification			
	Size: 150ul, Concentration: 450 ug/ml by Nanodrop; Source: Rabbit Isotype: IgG Immunogen Catalog Number: AG33523	GeneID (NCBI): 23314 UNIPROT ID: Q9UPW6	Recommended Dilutions: WB: 1:1000-1:4000 IHC: 1:500-1:2000			
				Full Name:		
				SATB homeobox 2		
		Calculated MW: 733 aa, 83 kDa				
		Observed MW: 90 kDa				
		Applications	Tested Applications:	Positive Co	Controls:	
			WB, IHC, ELISA	WB : HEK-29	WB : HEK-293 cells, mouse brain tissue	
Species Specificity: human, mouse	IHC : huma		IHC : human colon cancer tissue,			
Note-IHC: suggested antigen retrieval with TE buffer pH 9.0; (*) Alternatively, antigen retrieval may be performed with citrate buffer pH 6.0						
Background Information	SATB2, also named as KIAA1034, belongs to the CUT homeobox family. SATB2 binds to DNA at nuclear matrix- or scaffold-associated regions. STAB2 recognizes the sugar-phosphate structure of double-stranded DNA. SATB2 is a transcription factor controlling nuclear gene expression, by binding to matrix attachment regions (MARs) of DNA and inducing a local chromatin-loop remodeling. SATB2 acts as a docking site for several chromatin remodeling enzymes and also by recruiting corepressors (HDACs) or coactivators (HATs) directly to promoters and enhancers. It is required for the initiation of the upper-layer neurons (UL1) specific genetic program and for the inactivation of deep-layer neurons (DL) and UL2 specific genes, probably by modulating BCL11B expression. It is a repressor of Ctip2 and regulatory determinant of corticocortical connections in the developing cerebral cortex. SATB2 may play an important role in palate formation. SATB2 acts as a molecular node in a transcriptional network regulating skeletal development and osteoblast differentiation.					
U	transcription factor controlling nuclea inducing a local chromatin-loop reme enzymes and also by recruiting corep is required for the initiation of the up deep-layer neurons (DL) and UL2 spec Ctip2 and regulatory determinant of an important role in palate formation	odeling. SATB2 acts as a docking site pressors (HDACs) or coactivators (HA oper-layer neurons (UL1) specific ger cific genes, probably by modulating corticocortical connections in the de n. SATB2 acts as a molecular node in	atrix attachment regions (MARs) of DNA and e for several chromatin remodeling Ts) directly to promoters and enhancers. It etic program and for the inactivation of BCL11B expression. It is a repressor of veloping cerebral cortex. SATB2 may play			
Storage	transcription factor controlling nuclea inducing a local chromatin-loop reme enzymes and also by recruiting corep is required for the initiation of the up deep-layer neurons (DL) and UL2 spec Ctip2 and regulatory determinant of an important role in palate formation	odeling. SATB2 acts as a docking situ pressors (HDACs) or coactivators (HA oper-layer neurons (UL1) specific gen cific genes, probably by modulating corticocortical connections in the de n. For technical support and original validation data for this product please contact:T: 1 (888) 4PTGLAB (1-888-478-4522) (toll freeE: proteintech@ptglab.comin USA), or 1(312) 455-8498 (outside USA)W: ptglab.com

This product is exclusively available under Proteintech Group brand and is not available to purchase from any other manufacturer.

## Selected Validation Data

Immunohistochemical analysis of paraffinembedded human colon cancer tissue slide using 30717-1-AP (SATB2 antibody) at dilution of 1:1000 (under 20x lens). Heat mediated antigen retrieval with Tris-EDTA buffer (pH 9.0).

Various lysates were subjected to SDS PAGE followed by western blot with 30717-1-AP (SATB2 antibody) at dilution of 1:2000 incubated at room temperature for 1.5 hours.
