Background Information

MBOAT4, also known as ghrelin O-acyltransferase (GOAT), is an endoplasmic reticulum enzyme that catalyzes the octanoylation of the peptide hormone ghrelin, which is essential for the binding of ghrelin to its receptor and the subsequent regulation of food intake, growth hormone secretion, and inhibition of insulin secretion (PMID: 34946685). MBOAT4 is considered a potential therapeutic target for treating disorders related to ghrelin signaling (PMID: 32564644).
