IFT88 Monoclonal antibody

Catalog Number:60227-1-lg Featured Product 7 Publications

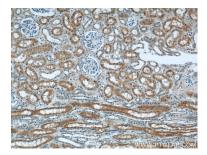

Basic Information	Catalog Number: 60227-1-lg	GenBank Accession Number: BC030776	Purification Method: Protein A purification	
	Size:	GenelD (NCBI):	CloneNo.:	
	150ul , Concentration: 1400 ug/ml by Nanodrop and 1000 ug/ml by Bradforc method using BSA as the standard;	8100	4A4G5	
		UNIPROT ID:	Recommended Dilutions:	
		Q13099	WB 1:500-1:2000	
	Source:	Full Name:	IP 0.5-4.0 ug for 1.0-3.0 mg of total	
	Mouse Isotype: IgG1 Immunogen Catalog Number: AG4980	intraflagellar transport 88 homolog (Chlamydomonas)	protein lysate IHC 1:20-1:200	
		Calculated MW: 94 kDa		
		Observed MW:		
		88-95 kDa		
Applications	Tested Applications:	Positive Controls:		
	WB, IP, IHC, ELISA	WB : Human testis, tissue		
	Cited Applications: IP : PC-3 ce		ells,	
	WB, IF	IHC : huma	n kidney tissue, human heart tissue, humar	
	Species Specificity: human, mouse, rat	pancreas tissue		
	Cited Species: human, mouse			
	Note-IHC: suggested antigen re TE buffer pH 9.0; (*) Alternativ retrieval may be performed wi buffer pH 6.0	ely, antigen		
		Intraflagellar transport (IFT), mediated by molecular motors and IFT particles, is an important transport process that occurs in the cilium and has been shown to be essential for the assembly and maintenance of cilia and flagella in many organisms. IFT88 (intraflagellar transport protein 88; also known as TG737 or TTC10) is a component of IFT particles and required for cilium biogenesis. Defects in IFT88/Tg737 lead to polycystic kidney disease (11062270). IFT88 localizes to spindle poles during mitosis and is required for spindle orientation in mitosis (21441926). This antibody was raised against the C-terminal region of human IFT88 and can detect the endogenous level of IFT88.		
Background Information	occurs in the cilium and has been show many organisms. IFT88 (intraflagella particles and required for cilium bioge IFT88 localizes to spindle poles durin	wn to be essential for the assembly r transport protein 88; also known a enesis. Defects in IFT88/Tg737 lea g mitosis and is required for spindl	y and maintenance of cilia and flagella in as TG737 or TTC 10) is a component of IFT d to polycystic kidney disease (11062270). e orientation in mitosis (21441926). This	
	occurs in the cilium and has been show many organisms. Selected Validation Data

Immunohistochemical analysis of paraffinembedded human kidney using 60227-1-Ig(IFT88 antibody) at dilution of 1:50 (under 10x lens).

Immunohistochemical analysis of paraffinembedded human kidney using 60227-1-Ig(IFT88 antibody) at dilution of 1:50 (under 40x lens).

human testis tissue were subjected to SDS PAGE followed by western blot with 60227-1-1g (IFT88 antibody) at dilution of 1:1000 incubated at room temperature for 1.5 hours.

IP result of anti-IFT88 (IP:60227-1-Ig, 5ug; Detection:60227-1-Ig 1:800) with PC-3 cells lysate 1040ug.
