## Phospho-RB1 (Ser780) Recombinant antibody

Catalog Number:84692-1-RR

1 Publications

Basic Information	Catalog Number: 84692-1-RR	GenBank Accession Number: BC039060	Purification Metho Protein A purfication	
	Size:	GeneID (NCBI):	CloneNo.:	
	100ul , Concentration: 1000 ug/ml by		241827H7	
	Nanodrop;	UNIPROT ID:	Recommended Dilutions:	
	Source:	P06400	WB 1:1000-1:8000	
	Rabbit	Full Name:		
	lsotype: lgG	retinoblastoma 1		
	igu	Calculated MW: 928 aa, 106 kDa Observed MW: 110 kDa		
Applications	Tested Applications:	B, ELISA WB : λ phosphatase treated K-562 cells, ted Applications:		
	WB, ELISA			
	Cited Applications: WB			
	Species Specificity: human			
	Cited Species: human			
Background Information	RB1, also named as pp110, pRb and p	-		
Background Information	RB1, also named as pp110, pRb and p of entry into cell division that acts as The underphosphorylated, active forr cell cycle arrest. It is directly involve and, in particular, that of constitutive histone methyltransferases SUV 39H1 RB1 controls histone H4 'Lys-20' trime transcriptional repression by SMARC/ promoter. In resting neurons, transcrip phospho-RB1-HDAC 1 repressor complex. I protein or adenovirus E1A protein inc This antibody is a rabbit polyclonal a	a tumor suppressor. RB1 acts as a t n of RB1 interacts with E2F1 and re d in heterochromatin formation by heterochromatin by stabilizing his t, SUV420H1 and SUV420H2, leadir ethylation and inhibits the intrinsic A4/BRG1 by recruiting a histone de ption of the c-FOS promoter is inhil lex. Upon calcium influx, RB1 is dep n case of viral infections, interactio luce the disassembly of RB1-E2F1 of	ranscription repressor o presses its transcription maintaining overall ch stone methylation. It rec ng to epigenetic transcri kinase activity of TAF1 accetylase (HDAC) comp bited by BRG1-depender phosphorylated by calci ons with SV40 large T ar complex thereby disrup	f E2F 1 target genu activity, leading romatin structure ruits and targets ptional repressio L. It mediates lex to the c-FOS n recruitment of <i>i</i> neurin, which lea ntigen, HPV E7 ting RB1's activity
	The underphosphorylated, active forr cell cycle arrest. It is directly involve and, in particular, that of constitutive histone methyltransferases SUV39H3 RB1 controls histone H4 'Lys-20' trime transcriptional repression by SMARC/ promoter. In resting neurons, transcrip phospho-RB1-HDAC1 repressor complex. I protein or adenovirus E1A protein inc This antibody is a rabbit polyclonal a	a tumor suppressor. RB1 acts as a t n of RB1 interacts with E2F1 and re d in heterochromatin formation by heterochromatin by stabilizing his t, SUV420H1 and SUV420H2, leadir ethylation and inhibits the intrinsic A4/BRG1 by recruiting a histone de ption of the c-FOS promoter is inhil lex. Upon calcium influx, RB1 is dep n case of viral infections, interactio luce the disassembly of RB1-E2F1 c ntibody raised against residues ne	ranscription repressor o presses its transcription maintaining overall ch stone methylation. It rec ng to epigenetic transcri kinase activity of TAF1 accetylase (HDAC) comp bited by BRG1-depender phosphorylated by calci ons with SV40 large T ar complex thereby disrup	f E2F 1 target gene activity, leading romatin structure ruits and targets ptional repression L. It mediates lex to the c-FOS nt recruitment of a neurin, which lea ntigen, HPV E7 ting RB1's activity nan RB1.
	The underphosphorylated, active for cell cycle arrest. It is directly involve and, in particular, that of constitutive histone methyltransferases SUV39H1 RB1 controls histone H4 'Lys-20' trime transcriptional repression by SMARC/ promoter. In resting neurons, transcrip phospho-RB1-HDAC1 repressor complex. I protein or adenovirus E1A protein inc This antibody is a rabbit polyclonal a	a tumor suppressor. RB1 acts as a t n of RB1 interacts with E2F1 and red d in heterochromatin formation by heterochromatin by stabilizing his t, SUV420H1 and SUV420H2, leadir thylation and inhibits the intrinsic 4A/BRG1 by recruiting a histone de- ption of the c-FOS promoter is inhil lex. Upon calcium influx, RB1 is dep n case of viral infections, interactio fuce the disassembly of RB1-E2F1 c ntibody raised against residues ne	ranscription repressor o presses its transcription maintaining overall ch stone methylation. It rec ng to epigenetic transcri kinase activity of TAF1 acetylase (HDAC) comp bited by BRG1-depender phosphorylated by calci ons with SV40 large T ar complex thereby disrup ar the C terminus of hur	f E2F 1 target gene activity, leading romatin structure rruits and targets ptional repression lex to the c-FOS nt recruitment of a neurin, which lea ttigen, HPV E7 ting RB1's activity man RB1.
Background Information	The underphosphorylated, active for cell cycle arrest. It is directly involve and, in particular, that of constitutive histone methyltransferases SUV39H1 RB1 controls histone H4 'Lys-20' trime transcriptional repression by SMARC/ promoter. In resting neurons, transcrip phospho-RB1-HDAC1 repressor complex. I protein or adenovirus E1A protein inc This antibody is a rabbit polyclonal a	a tumor suppressor. RB1 acts as a t n of RB1 interacts with E2F1 and red d in heterochromatin formation by heterochromatin by stabilizing his t, SUV420H1 and SUV420H2, leadir thylation and inhibits the intrinsic 4A/BRG1 by recruiting a histone de- ption of the c-FOS promoter is inhil lex. Upon calcium influx, RB1 is dep n case of viral infections, interactio fuce the disassembly of RB1-E2F1 c ntibody raised against residues ne	ranscription repressor o presses its transcription maintaining overall ch stone methylation. It rec ng to epigenetic transcri kinase activity of TAF1 accetylase (HDAC) comp bited by BRG1-depender phosphorylated by calci ons with SV40 large T ar complex thereby disrup	f E2F 1 target genu activity, leading romatin structure ruits and targets ptional repressio L. It mediates lex to the c-FOS th recruitment of a neurin, which lea ntigen, HPV E7 ting RB1's activity nan RB1.

This product is exclusively available under Proteintech Group brand and is not available to purchase from any other manufacturer.

## Selected Validation Data

Non-treated K-562 cells, phosphatase inhibitor treated K-562 cells and  $\lambda$  phosphatase treated K-562 cells were subjected to SDS PAGE followed by western blot with 84692-1-RR (Phospho-RB1 (Ser780) antibody) at dilution of 1:4000 incubated at room temperature for 1.5 hours. The membrane was stripped and re-blotted with Lamin B1 (66095-1-lg) antibody as a loading control.
