Background Information

XPR1 is a receptor for xenotropic and polytropic murine leukemia retroviruses and a homolog of yeast Syg1 and plant Pi transporter PHO1 (PMID: 20633538). XPR1 has been identified as an atypical G-protein-coupled receptor. Xenotropic or polytropic retrovirus binding to XPR1 can disrupt the cAMP-mediated signaling function of Xpr1, leading to the apoptosis of infected cells (PMID: 22090134). A band of about 82-100 kDa is probably due to abnormal migration of the protein or post-translation modifications. In addition, a band of about 55-72 kDa may be isoforms and fragments.

Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 84902-1-RR (XPR1 antibody) at dilution of 1:5000 incubated at room temperature for 1.5 hours.

Biacore BLI kinetic assays of 84902-1-RR against Human XPR1 were performed. The affinity constant is below 1 pM.
