			Reconstitution	Reconstitution:	Shipping:
			and Storage	Reconstitute at 0.25 µg/µl in 200 µl sterile water for short-term storage. After reconstitution with sterile water, if glycerol has no effect on subsequent experiments, it is recommended to add an equal volume of glycerol for long-term storage (see Stability and Storage for more details).	The product is shipped at ambient temperature. Upon receipt, store it immediately at the recommended temperature (see below).
				If a different concentration is needed for your purposes please adjust the reconstitution volume as required (please note: the ion concentration of the final solution will vary according to the volume used). Note: Centrifuge vial before opening. When reconstituting, gently pipet and wash down the sides of the vial to ensure full recovery of the protein into solution.	
			Chale iliter and Change and	Store for up to 12 months at -20°C to -80°C as lyophilized	
			Stability and Storage	powder.	
			Storage of	Short Term Storage:	
			Reconstituted Protein	Store at 2-8°C for (1-2 weeks).	
			Reconstituted Protein	Long Term Storage: Aliquot and store at -20°C to -80°C for up to 3 months, reconstitution with sterile water and addition of an equal volume of glycerol. Avoid repeat freeze-thaw cycles.
