Background Information

OTUD6B, also known as DUBA5, belongs to a DUB subfamily characterized by an ovarian tumor domain (OTU). It's a functional deubiquitinating enzyme, a class of protease that specifically cleaves ubiquitin linkages. OTUD6B function may be connected to growth and proliferation. It has been reported that OTUD6B could significantly suppress HCC cells migration and metastasis. The calculated molecular weight of OTUD6B is 34 kDa, 68450-1-Ig can detect the band around 34 kDa.(PMID:32323143)
