For Research Use Only

CoraLite® Plus 488-conjugated CD141/Thrombomodulin Recombinant antibody

Catalog Number: CL488-83416-4

Basic Information

Catalog Number: GenBank Accession Number:

CL488-83416-4 NM 000361.3 GeneID (NCBI):

100ul, Concentration: 1000 ug/ml by 7056

Nanodrop: **UNIPROT ID:** Source P07204

Rabbit Full Name: Isotype: thrombomodulin

IgG Calculated MW:

60 kDa Observed MW: 100-105 kDa

Purification Method:

Protein A purification

CloneNo.: 240365D1

Recommended Dilutions: IF/ICC 1:50-1:500

Excitation/Emission maxima

wavelengths: 493 nm / 522 nm

Applications

Tested Applications:

IF/ICC

Species Specificity:

human

Positive Controls:

IF/ICC: A431 cells,

Background Information

Thrombomodulin, also known as CD141, is an endothelial cell surface glycoprotein that forms a 1:1 complex with the coagulation factor thrombin and plays an important role as a natural anticoagulant. Thrombomodulin serves to convert thrombin from a procoagulant protein into the activator for protein C. Once converted to activated protein C (APC), this protein serves as a major anticoagulant in blood (PMID: 2827310). Thrombomodulin is also located in $other cells \ (keratinocytes, osteoblasts, macrophages, \dots) \ where it might be involved in cell \ differentiation or in the contraction of the c$ inflammation (PMID: 9814688). In humans, thrombomodulin is encoded by the THBD gene. Mutations in this gene are a cause of thromboembolic disease, also known as inherited thrombophilia. Thrombomodulin is glycosylated and has an apparent molecular weight of 75 to 110 kDa (PMID: 1650405; 2827310).

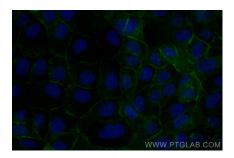

Storage

Store at -20°C. Avoid exposure to light. Stable for one year after shipment. Storage Buffer

PBS with 50% Glycerol, 0.05% Proclin300, 0.5% BSA, pH 7.3.

Aliquoting is unnecessary for -20°C storage

Selected Validation Data

Immunofluorescent analysis of (4% PFA) fixed A431 cells using Coralite® Plus 488 CD141/Thrombomodulin antibody (CL488-83416-4, Clone: 240365D1) at dilution of 1:100.
