|                               |  |   |  |
| Species Specificity:<br>human |  |   |  |
| Background Information        | CD82 is a membrane glycoprotein and belongs to the tetraspanin superfamily, many of which are implicated in the regulation of cell motility, morphology, fusion, signaling, fertilization, and differentiation. CD82 was originally identified as a suppressor of metastasis located on human chromosome 11p11.2 in prostate carcinoma. The majority of evidence indicates that CD82 expression is downregulated or abolished in a variety of metastasi close and macrophage lineages and in various epithelial cells in the prostate, lung, pancreas and many other tissues. In epithelial cells, CD82 is implicated in diverse biological processes such as cell adhesion, migration, apoptosis and morphogenesis. |   |  |
|                               | present at high levels in human mon<br>lung, pancreas and many other tissue  | ocyte and macrophage lineages an<br>s. In epithelial cells, CD82 is impli | ed in a variety of malignant tumors. CD82 is<br>d in various epithelial cells in the prostate, |

This product is exclusively available under Proteintech Group brand and is not available to purchase from any other manufacturer.

## Selected Validation Data

Immunofluorescent analysis of (4% PFA) fixed Jurkat cells using CoraLite® Plus 488 CD82 antibody (CL488-84617-3, Clone: 241765E10) at dilution of 1:200.
