Background Information

CD8 is a transmembrane glycoprotein composed of two disulfide-linked chains. It can be present as a homodimer of CD8α or as a heterodimer of CD8α and CD8β (PMID: 3264320; 8253791). CD8 is found on most thymocytes. The majority of class I-restricted T cells express mostly the CD8αβ heterodimer while CD8αα homodimers alone have been found on some gut intraepithelial T cells , on some T cell receptor (TCR) γ δ T cells and on NK cells (PMID: 2111591; 1831127; 8420975). CD8 acts as a co-receptor that binds to MHC class-I and participates in cytotoxic T cell activation (PMID: 8499079). During T cell development, CD8 is required for positive selection of CD4-/CD8+ T cells (PMID: 1968084).

Selected Validation Data

1x10^6 human PBMCs were surface stained with FITC Anti-Human CD3 and 5 ul CoraLite® Plus 647 Anti-Human CD8 Rabbit Recombinant Antibody (CL647-65510, Clone:UCHT4) or CoraLite® Plus 647-conjugated Rabbit IgG control PolyAb (CL647-30000). Cells were not fixed. Lymphocytes were gated.
