Background

Neurofilaments are the 10 nm intermediate filaments found specifically in neurons. They are a major component of the cell's cytoskeleton, and provide support for normal axonal radial growth. Neurofilaments usually contain three intermediate filament proteins: L, M, and H, which are involved in the maintenance of neuronal caliber. This kit is specific to NF-L.

Synonyms

68 kDa neurofilament protein, NEFL, Neurofilament L, NF, NF68, NFL, NF-L
