Background

FERMT2, also named as KIND2, MIG2, PLEKHC1, MIG-2 and Kindlin-2, belongs to the kindlin family. There are three FERMT2 isoforms that participate in the connection between extracellular matrix (ECM) adhesion sites and the actin cytoskeleton and also in the orchestration of actin assembly and cell shape modulation. FERMT2 recruits migfilin (FBLP1) protein to cell-ECM focal adhesion sites. Variable expression in human cancers and mesenchymal cancer invasion are now linked with FERMT2, which may play important role in carcinomas development.

Synonyms

Fermitin family homolog 2, FERMT2, KIND2, Kindlin 2, mig 2, MIG2, PLEKHC1, UNC112, UNC112B
